

Oral Presentation

No.	Title of the Presentation	Author(s)	Page
O-01	Breaking cyst dormancy and enhancing astaxanthin productivity in <i>Haematococcus lacustris</i> by ultrasound pretreatment	Aditya Lakshmi Narasimhan	1
O-02	Integrated strategy for PET recycling: Co-production of green H ₂ and aviation fuels from PET waste through catalytic hydrodeoxygenation and in-situ aqueous phase reforming	Vishnu Murali	2
O-03	Versatile and Efficient Recycling Approach via Vitrimerization of Mixed Plastic Waste	Gyeonghwan Choi	3
O-04	Heterogeneous Catalysis Driving Sustainable Polyurethane Recycling: A Novel Closed-Loop Approach	Swathi P N	4
O-05	Bio-Degradable and Recyclable Poly(β -amino esters) Covalent Adaptable Network based Adhesives	Miock Yang	5
O-06	The Study on Rheological and Mechanical Properties of Polyethylene Terephthalate (PET) Vitrimers and Nanocomposites from recycling PET	SeungHyeon Jin	6
O-07	UV Responsive Covalent Adaptable Network Toward On-Demand, Non-Contact, and Reversible Shape Fixation of Microstructures	Yeomyung Yoon	7
O-08	Tailoring Metal-Support Interactions for Enhanced CNT Crystallinity: Influence of Support Types	Jiwoo Kim	8
O-09	Novel NiCo-Pi/Ni nanostructure catalyst for anodic oxygen evolution reaction coupled with microbial electrosynthetic CO ₂ conversion	Eunseo Kim	9
O-10	Role of molybdenum in layered double hydroxides as catalysts for carbon nanotube synthesis	Yeonsu Shin	10
O-11	Promoting germination and photosynthetic cell growth in <i>Haematococcus lacustris</i> by mild pressure	Hyoji Yu	11
O-12	Highly Flexible Electrochromic Devices Containing Photo-curable Acrylated Viologens	Sooyeon Eom	12
O-13	GFRP with Wax Sweating Effect for Self-healing and Self-lubricating	Su Jeong Heo	13

O-14	Organic Phase Change Material Composite with Segregated Thermally Conductive Filler Structure for Efficient Heat Dissipation	Donghun Lee	14
O-15	Fabrication of High Temperature Resistant PI-based CFRP with Integrated CNT Film via Joule Heating Process	Song Hee Kim	15
O-16	BreakLab: A GUI Application for Adsorption and Sorption Enhanced Steam Methane Reforming Breakthrough Simulations	Hassan Muhammad	16
O-17	A Study on the Dynamic Characteristics of the Spinning Behavior in Melt Electrospinning	Jihwan Lim	17
O-18	Shear-Aligned Cholesteric Liquid Crystal Elastomers: Effect of Molecular Weight on the Helical Structure	Chaewon Seo	18
O-19	Design of a Methanol Energy Storage System with CO2 Recycling Configuration	Sihwan Park	19
O-20	Photo-annealed electrospun TiO2 nanofibers as ion-storage layer for self-rechargeable Zn-based electrochromic energy storage device	Raksha Pal	20
